# Manage

Optimise Outcomes from the Start

A well-conceived digital strategy can remove the data roadblocks that inhibit information flow on a project. Clients value our management services to assist them to achieve optimal project outcomes.

From clash detection services to client education and training, we offer a raft of ways clients can tap our proven industry experience.
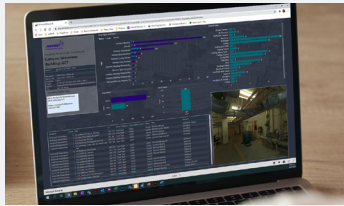

ASBUILT MANAGE SERVICES
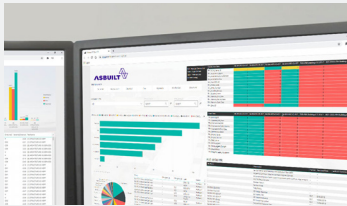

Data Analytics

asBuilt deploy data analytics to identify problems on a project and highlight to delivery teams the magnitude of those issues. Using the latest common data environments to federate information sets, we produce bespoke dashboards to convey the analysis more clearly.

Digital QA/QC

The workflows we create establish key focus objectives for continuous improvement. We will always look to create innovative quality solutions that achieve a better managed design or construction process.

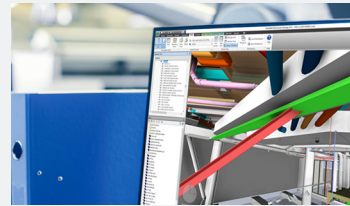

Clash Management

Clashes happen on every project and if they go undetected, can have significant consequences. asBuilt use our experience and technology to identify and report where clashes occur and offer remedies to resolve them.

BIM Project Execution

The execution of a digital strategy on a project enables the information to flow between organisations. The role of a BIM or Digital Engineering Manager is to use that strategy to identify and remove the roadblocks that inhibit that flow of information.
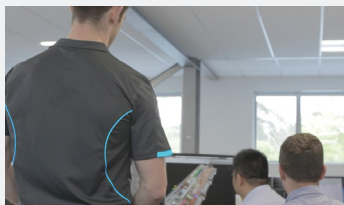

Education

Executing best practice data management processes often requires education of project participants in how to deliver smarter. We take time to invest properly in project set-up and run industry training.
